

Richard is Head of Offshore and Global Projects for Lloyd's Register.

A marine engineer, Richard joined Lloyd's Register in 1998 following a seagoing career with P&O. Starting as a design appraisal surveyor in the piping systems discipline, Richard has progressed through a variety of roles with LR, including project management, business development and departmental management. He was formerly manager of LR's Aberdeen office, responsible for the delivery of Compliance, Consulting and Asset Integrity services to the offshore industry. In 2012 he became VP, Operations for Compliance Services, responsible for service delivery and technical quality from our global network of design support and field offices, also having responsibility for the administration and governance of LR's Class and Statutory activities.

In his current role, Richard has focal point responsibility for Lloyd's Register's global Offshore Classification, Certification and Verification business as part of the Marine and Offshore management team. He has a particular interest in the development and effective implementation of goal-based approaches to asset safety and integrity assurance, such as those prescribed by EU Directive 2013/30/EU.
